

SPARFELL and SQUAKE Partner to Bring Sustainable Aviation Fuels to the Forefront

Press release

Geneva, 29th May 2024

SPARFELL, a leading aircraft management and charter company, is thrilled to announce a groundbreaking partnership with SQUAKE, a pioneering sustainability solutions provider, to revolutionize the private aviation industry's approach to sustainability.

Through this innovative collaboration, SPARFELL is making Sustainable Aviation Fuels (SAF) easily accessible and seamlessly integrated into the booking process. Now, every time a flight is booked with SPARFELL, customers will have the power to replace conventional jet fuel with SAF, reducing their carbon footprint by up to 100%.

Crafted from waste materials, SAF is set to become the regulated standard for the future of air travel. Thanks to SPARFELL's partnership with SQUAKE, a pioneering "book & claim" system is being introduced, empowering customers to support the growth and adoption of SAF, even if it is not yet available at their departure airport and ensuring the equivalent amount of sustainable aviation fuel is used elsewhere.

The seamless integration of this sustainable solution is made possible through SPARFELL's innovative partners, Skylegs and SQUAKE. Skylegs, a cutting-edge flight operations management platform, has been equipped with a CO2 calculator from SQUAKE, enabling SPARFELL's charter team to offer efficient service while prioritizing environmental responsibility.

With SQUAKE calculating each flight's carbon footprint and Skylegs streamlining the booking experience, opting for SAF has become a natural and effortless choice for SPARFELL's customers. This integration means that with every booking, the opportunity to compensate emissions with SAF is automatically presented.

Together, SPARFELL, SQUAKE, and Skylegs are not just simplifying the booking experience, but transforming it into a model of sustainability. Customers can now calculate the cost, carbon impact, and compensate for CO2 emissions of their flights, all in one seamless step.

SPARFELL's clients can now fly smarter and make a tangible impact with every kilometer travelled, thanks to this ground-breaking partnership. As the industry continues to evolve, SPARFELL remains committed to leading the way in sustainable aviation solutions.
